Jay Alvin Co

Email address: jalbinco@gmail.com
Birthdate: June 18, 1991
Contact number: **+63 905 574 1020**
Address: 14 Policarpio Street, Cainta, Rizal, Philippines
Website: **https://jayalvin.co/**

Key Skills:

- Agile and scrum methodology
- Angular architecture: component/module design, aside & modal panel patterns, routing, reactive & template-driven forms, feature-flag → activity/permission-based access control migration
- Legacy migration: large-scale legacy-to-Angular UI migration (multi-quarter, multi-team effort)
- Data & integration: REST API integration, 3rd-party push API integration, filterable data grids, CSV/PDF export, pagination
- Quality & process: form validation, accessibility fixes, TSLint/stylelint compliance, PR-based code review, UI-architect review cycles
- Collaboration: QA-driven UI refinement, delivery across multiple Agile scrum teams on a shared enterprise codebase
- Automation tools, N8N, AI Integration , Claude, React Vite, Tailwind CSS, AI Agents, LLM, Python

Work Experience:

Software Engineer (**9** Years) **July 2017 – August 2026**
RealPage Philippines, Inc.

- Led UI migration of the Eviction Management module from a legacy system to Angular, including document review, email workflows, and 3rd-party API integration
- Delivered Rent Stabilization Renewal features covering single and bulk renewal-offer selection for exempt and non-exempt units
- Built Prospects module features (leasing-consultant reassignment, inactive-prospect management) and Appointments/Follow-up scheduling with dynamic in-app notifications
- Built the Internal Compliance Review feature: filterable grid, review actions, and CSV/PDF export, plus its dashboard navigation entry point
- Drove platform-wide migration from feature-flag-based to activity/permission-based access control
- Resolved production defects (form validation, navigation, accessibility) across property-management workflows, working through structured PR and UI-architect review cycles

Software Developer (2.5 Years) **June 2014 – February 2017**
Klab Cyscorpions

- Developed and maintained mobile game applications, contributing to both client-side and server-side components throughout the development lifecycle.
- Implemented bug fixes, performance improvements, and new game features to support regular content updates and enhance player experience.
- Participated in full-cycle game development, from requirements gathering and technical planning to production deployment and post-release support.

Software Developer **January 2013 – June 2014**
Gulliver Integrated Outsourcing

- Provided technical support and development assistance for clientele platforms, ensuring system functionality and user satisfaction.
- Participated in the design, research, and development of mobile application solutions, contributing to feature planning and technology evaluation.
- Collaborated with cross-functional teams to analyze requirements, troubleshoot issues, and implement software enhancements.

Bachelor of Science in Software Engineering
University of Santo Tomas, 2012
